Module 8 Project: Angular

Instructions

For this project you will install the Angular command line interface (CLI). After reading “Chapter 7: Discovering Angular, Angular Material, and RxJS”, start with the section titled ‘Angular CLI’ and use npm to install the Angular CLI Project. Move to the section titled ‘Bonus: Hello world with the Angular CLI’ and complete all coding. Be sure your code compiles cleanly. Take a screen snip of your web page after creating and modifying the foo component.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your file (source code and a screen snip of your web page after creating and modifying the foo component) to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
